Announcement. 486

Author Index for Volume 39. 487

The Subject Index for Volume 39 will appear in the December 1986 issue as part of a cumulative index for the year 1986.

INSTRUCTIONS TO AUTHORS

Manuscripts. Papers may represent original research in any of the disciplines now concerned with man-environmental relationships; it is anticipated that the relevance of the findings to broad problems of environmental biology and environmental medicine will be considered. Analytical and integrative reviews are equally eligible. The editorial emphasis of the Journal is on research concerning health effects of environmental alterations, broadly considered; engineering and control efforts are well served elsewhere.

Selected Book Reviews will be included.

Submission of Manuscripts. These should be submitted in duplicate to any member of the Board of Editors or to ENVIRONMENTAL RESEARCH, Editorial Offices, Environmental Sciences Laboratory, Mount Sinai School of Medicine, Fifth Avenue and 100th Street, New York, New York 10029. Further, prior review of the paper may be undertaken with a member of the Board of Consulting Editors, especially one with particular competence in the area concerned (environmental physiology, epidemiology and biostatistics, ecology, occupational medicine, toxicology, anthropology, climatology, air pollution, environmental medicine, geophysics, etc.); this will often expedite consideration of the paper.

Original papers only will be considered. Manuscripts are accepted for review with the understanding that the same work has not been and will not be nor is presently submitted elsewhere, and that its submission for publication has been approved by all of the authors and by the institution where the work was carried out; further, that any person cited as a source of personal communications has approved such citation. Written authorization may be required at the Editor's discretion. Articles and any other material published in *Environmental Research* represent the opinions of the author(s) and should not be construed to reflect the opinions of the Editor(s) and the Publisher.

Authors submitting a manuscript do so on the understanding that if it is accepted for publication, copyright in the article, including the right to reproduce the article in all forms and media, shall be assigned exclusively to the Publisher. The Publisher will not refuse any reasonable request by the author for permission to reproduce any of his or her contributions to the journal.

All papers will be published in English. It is preferable that papers be submitted in English to ensure faithfulness to the author's meaning. If necessary, however, a translation will be arranged.

Form of Manuscript. Manuscripts should be typewritten (not mimeographed) with double or triple spacing and wide margins on high-quality bond paper. Subdivision of the article into *Abstract* (50–200 words), *Introduction, Materials and Methods, Results, Discussion, Acknowledgments, and References* is recommended. However, variations of this format are acceptable if they provide clearer expression of the subject. In addition, section headings are often useful.

The first page of the manuscript should contain the article title, author's name, and affiliation (include zip code where applicable). The second page should contain a proposed running head of fewer than 40 characters and the address of the person to whom proofs are to be sent. In the upper left-hand corner of each following page (including Reference pages, Tables, etc.) please type a shortened form of the title and the surname of the senior author. Please also number each of these pages.

Abbreviations. Follow the usage established by *Chemical Abstracts.* If others are utilized define on first use.

Figures. Number all figures consecutively with Arabic numerals; legends should be typed together on a separate sheet. Lettering on the original figures should be large enough to take a reduction of 50–60 percent. Graphs should be plotted with black India ink on light blue coordinate paper, no larger than $8\frac{1}{2} \times 11$ in. Grid lines that are to show in the engraving should be inked in black. Photographs should be glossy prints (5×7 or 8×10 in.) with strong contrasts. X-Rays should be right-reading glossy prints. Providing an overlay that indicates the most critical areas of halftones will aid in ensuring high-quality reproduction. Illustrations in color can be accepted only if the authors defray the cost.

Tables. Number all tables in order of appearance (with Arabic numerals); type each table double-spaced on a separate page. Each table should have a short descriptive title typed (double-spaced)

above the table. Footnotes to tables (indicated by superscript lowercase letters, [a,b], etc.) should be typed (double-spaced) at the end of the table. Keep in mind the dimensions of the journal when planning the number of columns in a table.

Footnotes. Text footnotes should be avoided whenever possible. If they must be used, indicate them by superscript Arabic numerals,[1,2], etc., cited consecutively throughout the article, starting with the title. They should be typed double-spaced on a separate page.

References. These are to be cited in the text by the author's name and year of publication. References should be listed alphabetically at the end of the paper in the following order:

Coleman, D. C., Reid, C. P. P., and Cole, C. V. (1983). Biological strategies of nutrient cycling in soil systems. *In* "Advances in Ecological Research" (A. MacFadyen and E. D. Ford, Eds.), Vol. 13, pp. 1–55. Academic Press, New York/London.

Rice, E. L. (1984). "Allelopathy," 2nd ed. Academic Press, New York.

Wong, M. H., and Lau, W. M. (1985). Root growth of *Cynodon dactylon* and *Eleusine indica* collected from motorways at different concentrations of lead. *Environ. Res.* **36,** 257–267.

The names of journals should be abbreviated according to *Index Medicus,* 1980, or *Chemical Abstracts Service Source Index,* 1980. Include in the reference list articles that are "in press," but incorporate in the text or use footnotes for "manuscript in preparation," "personal communication," or "unpublished observations."

Reprints. A reprint order form will accompany the proofs. The senior author receives 50 reprints free of charge, and additional copies may be ordered.

Correspondence. Editorial communications should be addressed to ENVIRONMENTAL RESEARCH, Editorial Offices, Environmental Sciences Laboratory, Mount Sinai School of Medicine, Fifth Avenue and 100th Street, New York, NY 10029. Correspondence and information concerning subscriptions should be addressed to Academic Press, Inc., Journal Subscription Department, 6277 Sea Harbor Drive, Orlando, FL 32887. Correspondence concerning manuscripts in production and proofs should be addressed to Academic Press, Inc., Journal Production Department, 1250 Sixth Avenue, San Diego, CA 92101.

A unique new software package for microbiological laboratories...

Microbe Base

Flexible • Fast • Friendly

John Magee and Philip Wheat

The **Microbe Base** software package enables routine cross-infection, epidemiological, and susceptibility investigations to be performed with speed, accuracy, and flexibility. Its program can easily be tailored for individual laboratories, has no special requirements, and doesn't monopolize existing hardware.

Antibiotic susceptibility records are usually stored in paper files, making access tedious and time consuming. But **Microbe Base** records details on significant isolates and provides rapid and reliable data access.

Microbe Base has been proven in hospital use for:
• analysis of cross infection • susceptibility patterns and trends • monitoring of infection status in high risk areas • hospital epidemiology • financial implications of new clinical appointments • quality control of susceptibility testing and primary isolation rates.

This cost effective package is designed to be run by microbiologists, not programmers. It provides analysis facilities comparable to those available in high-cost minicomputer systems, and does not tie the laboratory reporting system to fallible hardware.

Included is a program which allows laboratories to specify species recognized (max 100), antibiotics tested (max 100), wards (max 120), consultants (max 120), and specimen types (max 50).

Microbe Base is available for the Apple* IIe, Commodore* 64, and other popular microcomputers.

Apple* IIe version
Manual and disk: $350.00/£290.00/ISBN: 0-12-465014-7
Manual only: $10.00/£8.00/ISBN: 0-12-465016-2

Available in the U.K. only

Commodore* 64 version
Manual and disk: £225.00/ISBN: 0-12-465010-4
Manual only: £8.00/ISBN: 0-12-465012-0

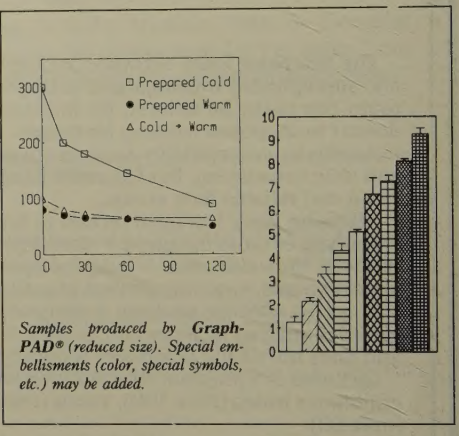
A New Software Package

GRAPH-PAD®

Graph Plotter And Digitizer

HARVEY MOTULSKY

Graph-PAD® is a unique software package that creates high quality graphs while saving time and money. **Graph-PAD®** also allows you greater flexibility in manipulating data through the mathematical and statistical capabilities of the program.



Samples produced by ***Graph-PAD®*** *(reduced size). Special embellisments (color, special symbols, etc.) may be added.*

Flexible data entry:
- Type onto a built-in "spreadsheet".
- Read disk files created by **Graph-PAD®**, Lotus 1-2-3®, or other programs.
- Digitize existing graphs. (Place a graph into the plotter; enter data by moving the pen manually to each point.)
- Entered data can be saved on a diskette.

Powerful data manipulation:
- Average replicate values and calculate error bars (S.D. or S.E.).
- Mathematically transform data (logarithm, exponentials, etc.).
- Calculate linear regression and plot best-fit line.

Versatile plotting:
- Plot bars, data points, or curves calculated from a selected equation.
- Place labels anywhere. Labels may include superscripts, subscripts, Greek letters, and mathematical symbols.
- Draw lines, arrows, boxes, or circles.
- Place second Y-axis on the right side of the plot.
- Select color pens.
- Graph of entered data can be displayed on the screen.

Easy to use:
- No computer experience necessary.
- Complete your first graph in less than one hour, even without reading the manual. Complete later graphs in less than ten minutes, faster than graphing by hand.
- Correct mistakes with ease.
- All choices are displayed; no need to memorize commands.

Hardware required:
- An IBM® PC or AT computer (or compatible) with 256K RAM, PC-DOS or MS-DOS (version 2.0 or later), a graphics adapter and monitor, and a communications (RS-232) port.
- A Hewlett-Packard 7470A or 7475A plotter (or compatible).

ISBN: 0-12-508830-2, October 1985, 120 pp., (manual) plus diskette, $340.00

To find out more about **Graph-PAD®**, or **to request a demonstration disk**, contact Brian Devine, Editor, Academic Press, Inc., Orlando, FL 32887, or phone (305) 345-4146.

An enhanced version of ***Graph-PAD®*** *is in development.*
